Bromley Borough Based Board

DATE: 17 November 2020

Title	Flu and Covid Vaccination Programmes Update	
This paper is for information .		
Executive Summary	Please find attached an update on the progress of the 2020/21 flu vaccination programme, together with a brief update on preparations for roll out of a Covid vaccination programme.	
Recommended action for the Committee	Please note the update provided. Discussion and questions are welcomed.	
Potential Conflicts of Interest	Flu and Covid vaccination delivery are both financially incentivised activity within general practice.	
Impacts of this proposal	Key risks & mitigations	Low availability of vaccine stocks has limited flu uptake levels. A national route for ordering additional vaccine stocks has now opened for general practice and pharmacy orders.
	Equality impact	Targeting of 'hard to reach' groups of patients or those affected by health inequalities is part of the flu campaign communications approach.
	Financial impact	Funding for flu delivery is available to general practice and pharmacies both as routinely commissioned and as enhanced or incentive schemes by borough. The Covid vaccination programme will include funding available to Primary Care Networks and to other providers delivering through community, trust or mass vaccination models.
Wider support for this proposal	Public Engagement	Patient communications and engagement is part of the flu delivery programme annually.
	Other Committee Discussion/ Internal Engagement	Both the flu and Covid vaccination programmes have their own and form part of other borough based governance structures.
