

Single Trusted Source of Truth to Improve Blood Pressure for Londoners

A project to use health data combined with a clinical effectiveness approach underpinned with meaningful patient and public engagement for a primary care led improvement in the detection and management and reduction inequalities in outcomes for patients with high blood pressure (hypertension) across London.

1 Health data infrastructure (HDI)

Series of workshops with stakeholders to develop a mapping process for our respective HDI and use of Discovery Data Service (DDS).

Map, understand and share existing good practice.

Collaboratively seek shared solutions to data challenges

Share and develop best practice for health data use and the Discovery Data Service across SEL, NEL and NWL for hypertension data.

Improvement in healthcare is 20% technical and 80% human”
Marjorie Godfrey

Hypertension is the leading cause of heart disease, stroke, kidney disease, dementia and early death globally, with wide inequalities in outcomes across London and care for hypertension has been severely impacted by COVID.
